

Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is a tool made out of top quality materials intended to be able to withstand the most difficult procedures and work environments. This piece of equipment could enable the one driving to control the forks hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the arms or the entire load in order to facilitate much more exact lifting and placement in a quicker and much more efficient way.

The unique fork pocket design enables the one operating it to be able to securely sway the unit's forks without any fear of destroying the positioning cylinders. This can allow the operator the alternative to either execute simultaneous or independent fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into fork positioners on available units.
